Web designers use both vector and raster graphics editors to create web-formatted imagery or design prototypes. Technologies used to create websites include W3C standards like HTML and CSS, which can be hand-coded or generated by WYSIWYG editing software. Other tools web designers might use include mark up validators and other testing tools for usability and accessibility to ensure their ...

In a sentence, web designers are the person who can design and produce websites. They are professional designers, but also the development engineers of the static site. Their work covers many aspects. The introduction of web content, the placement of buttons, the combination of words, the application of color, the use of guidance, and so on. But that's far away to be a good web designer.
